VIDALUX CLEAR & BRIGHT WATER SOFTENER

Guaranteed to get rid of limescale

Live in a hard water area?? Limescale in the kettle and on bathroom fixtures?? Suffering from unknown adverse health effects from this polluted drinking water??

If you have a steam shower and the generator becomes blocked with limescale and stops working THIS IS NOT COVERED BY THE WARRANTY, as in reality it is not the products fault, it's the poor quality water it has been subjected to

GOOD NEWS - Designed in partnership with one of the UK's largest and most trusted water softener manufacturers, this sleek, easy fit model is GUARANTEED to work or your money back!! Remove all the limescale in a 1-4 bedroom home and benefit from the following

Better tasting drinking water - Easy to install - Guaranteed to work or your money back
No plumbing or chemicals – Cost as little as £2.00 a year to run and the improved condition of the water pipes will reduce your heating bills - Made in the U.K - Trialled and tested Over 10 years | Used by professionals

Thank you for purchasing this product. To guarantee the product delivers a long service life, please ensure it is fitted and used in accordance with the instructions contained in this booklet.

Please check that the boxes contain all the items listed below, and report to us any parts that are missing or damaged prior to assembly and within 48 hours of receipt. Damages notified to us after this time will be chargeable.

CAREFULLY CHECK THE PRODUCT IS AS ORDERED: CORRECT SIZE AND COLOUR OPTION BEFORE YOU COMMENCE ANY OF THE INSTALLATION PROCESS

You should ensure that the floor where the shower is to be located is smooth, level and able to support the weight of the product when in use.

Installation of the shower cabin is designed for a DIY installation. However any electric supply to the unit itself is required by law to be installed by a qualified trades person to ensure safety and quality. Failure to have the showers electric feed installed by qualified fitters will invalidate your product guarantee and be dangerous.

Please ensure that all connections are water tight, safe and insulated (where applicable) as the unit has connections that are made for transport purposes only and are not fully tightened.

YOU WILL NEED

This Shower requires 2 x 1 Metre Braided Hoses

Not Supplied

No installation should take place until all items have been deemed cosmetically acceptable. Once installation commences all products then enter into their governing warranty periods and no returns can be accepted, by commencing with the installation you are accepting the goods cosmetic state with all 'workings' being covered by warranty. (contact us for more information before installing if required)

IMPORTANT NOTICE

Before you proceed with fitting your Vidalux Shower please read and understand the following:

By commencing testing and installation of the unit you are agreeing to the Terms and Conditions set out by us: copies of which are available by contacting us by email or by telephone (details on the cover of this manual).

You are required to ensure the purchased product dimensions allows for ease of passage to the intended installation area.

Regarding weight tolerances of installation area, it is advisable to contact a builder or refer to Building regulations to ensure the product placement area has sufficient joist/floor support.

1. It is important that you ensure that your purchase has been delivered undamaged. You are required to check the contents and report any damage that you feel needs repairing or replacing within 48hrs of receipt of goods. Items reported damaged after this time WILL be chargeable.
2. The product you have purchased is designed for home DIY fitting. You are only required under the Terms and Conditions to get any electrics feeding the shower installed by a qualified specialist. The product requires connection to electricity and this by law requires a Part P qualified electrician. Failure to provide evidence of this will void the relating product warranty
3. We are a supply only company. If you report to us any damage we will send replacements or solutions to remedy the problem described. We endeavor to fully understand the problem first by asking a series of questions and then propose the solution. We may even ask for digital images to be sent via email to assist the process. The warranty is parts only and does NOT include fitting/inconvenience or other related costs.
4. You are required to ensure that you correctly water test any bath tub before fitting and ensure that you/ your fitter fully tests the unit upon completion and attends to any leaks and faults before he leaves.
5. **All hoses, such as to the valve assembly, shower outputs and air switches and waste are fitted for transport purposes and need to be properly sealed and tightened before use.** During transportation some connections can become dislodged and therefore break any watertight seal, you are required to ensure that your fitter specifically tests for these possible occurrences and seal/fix accordingly.
6. **Do not book fitting until you have inspected the unit. We cannot be held responsible for delays and costs incurred by having to return to fit parts that need supplying.**
7. We cannot be held liable for inconvenience caused due to lack of bathing facilities caused by any delay in receiving your product or whilst awaiting parts.
8. Regarding our sales and technical support: We know our products and their requirements, but we are not qualified plumbers or electricians and accept no liability for claims suggesting the same. You are advised to check the suitability of the product with a professional body. It is the customer responsibility to ensure the product is fit for purpose.
9. A 'Completion Certificate' is included at the end of the manual where you should record the details of your installers - you will need this to record your warranty on our website. You MUST register the product warranty within 90 days following delivery

ATTENTION

ALWAYS FIT EASY TO GET TO ISOLATION TAPS ON BOTH THE HOT AND COLD WATER SUPPLY (NOT SUPPLIED). JUST LIKE A DISHWASHER OR WASHING MACHINE, THIS PRODUCT MUST BE ISOLATED WHEN NOT IN USE.

REMEMBER:

These showers are designed to be free standing and movable from their location should you have the need to replace anything. ALWAYS USE Flexible braided water inlet pipes (not supplied) at least a metre long (not central heating plastic type!)

Always use a flexible waste pipe from your house supply to the shower .

NEVER FIX with rigid pipes, NEVER FIX the unit to the wall.

Before you begin

Assembly requires two persons.

Tools needed to assemble this shower cabin:

Electric screwdriver with a selection of heads, regular screwdrivers, pipe grips, spanners, spirit level, sharp knife and rubber mallet. Connection of the electrical supply and plumbing may require additional tools.

Do not fully tighten any screw fixings initially during build as this allows the frame to move a little and aid location of all holes and screws; remember to fully tighten before completion and subsequent use. There is a drill bit supplied with the kit, to allow either widening of holes or drilling new holes which you feel cannot be located during construction.

Water requirements

This shower requires two water supplies (1 x hot and 1 x cold) tested to be between 1 and 3 bar, with a flow rate over 7.5 litres per minute.

NOTE: We recommend water pressures over 2 bar to achieve optimum showering results.

Gravity Fed systems

If you have a Gravity fed system, then fitting a Shower Pump will almost certainly be required. Fitting a Shower pump rated over 1.5 bar is necessary as a minimum. Shower pumps MUST be properly sited, installed and commissioned. Incorrectly installed shower pumps will cause adverse affects to your showering and bathing resulting in pulsing or starting and stopping of the pump. If a pump is installed, a separate Mains Cold supply must be fitted and directed to supply the Steam Generator separately (bypassing the pump).

Isolating Valves

You MUST fit isolation valves to the shower unit on both hot and cold incoming feeds as it enables you to turn off the water supply to the shower when not in use (for example going away on holiday). Additionally isolating valves makes service checks easier than locating the house stop cock.

Electrical

This model requires an electrical supply, this MUST be in the form of an ISOLATED FUSED SPUR. It is both illegal and dangerous to fit this shower to a plug socket in a Bathroom environment. The product may be supplied with a plug, this is pre-fitted for testing purposes only and should be removed to complete the install.

DUE TO THE NATURE OF THIS PRODUCT WE HIGHLY ADVISE THE PURCHASE AND FITTING OF A WATER SOFTENER

(PLEASE NOTE LIMESCALE BUILD UP MAY CAUSE DAMAGE TO YOUR SHOWER AND WILL NOT BE COVERED UNDER WARRANTY)

Assembly

Do not fit the shower into locations where you do not have at least 40cm access all around the cabin both for installation and for future service access.

We advise you do not fit sinks, toilets etc that restrict access behind the shower.

You must ensure you can slide the cabin away from the wall/corner for service access.

Smooth and level walls and floor are required for ideal installation conditions. Avoid carpet or vinyl floors.

Please ensure you have correctly water tested the tub before you continue.

NOTE: Instructions shown based on quadrant model, The assembly and operation is identical for offset models except for the rear panels being different sizes.

Please inspect all parts carefully before assembly.

BY COMMENCING ASSEMBLY OF THIS SHOWER YOU ACCEPT THAT THE PARTS HAVE ALL BEEN CHECKED AND ARE UNDA

This product is fitted with toughened safety glass. The glass is stronger than regular glass and if it breaks it will form small pieces of cubed glass, not

dangerous shards of glass. These small pieces are still sharp, so care must be taken to handle broken glass with care.

If the glass is put under stress or is chipped it will break.

DO NOT ALLOW THE GLASS TO IMPACT HARD SURFACES OR OBJECTS AS THIS MAY CHIP/WEAKEN THE GLASS. WEAKENED GLASS THAT IS CHIPPED OR UNDER TENSION MAY SHATTER AT ANY TIME, NOT ALWAYS IMMEDIATELY.

LEVELING AND FITTING THE TRAY

Remove the protective film covering the base.

Connect the soil pipe, trap and any couplings to the flexible waste under the tub. You may choose to fit either a HEPV0 trap with the appropriate couplings or choose to fit a McAlpine ST28M coupling to a McAlpine 28-NRV trap.

Attaching the feet, plinth brackets and waste, position the tub base in what will be its final location and adjust the feet until the base is level.

Now fill the base with water and check that the water flows adequately to the plug and exits satisfactorily. If the water does not flow to the plug fully, then you will need to increase the fall on the tray by adjusting the legs.

If the water does not exit the waste section fast enough, then ensure there is suitable fall in the waste pipe and/or no blockage or kinks in the pipe work.

Check and attend to any leaks.

This product is freestanding so you do not need to fix the feet to the floor.

Locate the two silver coloured upright frame sections and the top and bottom frame rail sections. You will need the ST3.8 x 50mm on the left side and the 40mm on the right to join these sections together.

The inside, upward facing edges of the rails will have a lip allowing for the roof to sit

Add the door retaining clips and insert seal

Have one person hold the front frame in position as you fix it in position. On the inside of the shower front corners are 4 holes vertically on each side. Using 10mm screws, join the front frame and side panels together at the 6 fixing points until all are secure.

SHOWER VALVE

The shower valve can be accessed from the rear of the shower and is located on the central tower.

The valve is divided into two parts that are joined together.

The uppermost part is the diverter. There are two connections able to be made here. One to the overhead shower and another to the hand shower/riser bar water inlet.

When making the connections, ensure they are water tight. Check all pre-fitted hoses as these may only be hand tight during manufacture.

Water Connections

This product requires a hot and cold water supply. Your Hot and Cold water supply pipes should ideally be finished about 1 meter above the floor centrally in the corner and finished with 15mm compression isolating valve. The shower will require two braided flexible hoses that connect to these water supply pipes from the shower valve.

WATER PRESSURE: 1-3 bar (ideally above 2 for optimum results)

WATER FLOW: above 7.5 litres per minute

Important Note Do not exceed 3.4 BAR pressure under any circumstances. Warranty is void if so as damage will occur. If you have a combi supply, please use a pressure reducing valve if required to lower the BAR pressure to the shower.

Fitting Isolating valves is recommended as this makes service access easier than locating the house Stop Cock. Additionally Isolating valve enable you to disconnect water to the shower if you are away from home for long periods of time.

Combination boiler installation and PEV's

This product does not normally require a Pressure Equalising Valve (PEV) as it uses the latest generation of shower valve Thermostatic Cartridge, which enables it to handle un-balanced water pressures itself, to provide accurate temperature control.

This shower product can be connected to Combi Boiler system that provide suitable water pressure and water flow rates.

Gravity Fed and Shower Pumps

Where the water is supplied by a hot water cylinder (gravity fed type systems) a shower pump should be installed. Ideally a shower pump rated over 2 bar supplying just the shower is recommended, or alternatively a pump of higher specification can be fitted to supply multiple showers within the property.

When choosing a pump, a twin impeller pump is recommended as this will ensure both the hot and cold water is of the same pressure. (You must seek further advise from a plumber to correctly spec the right shower pummp for your set-up

Always refer to the manufacturers instructions regarding shower pump installations and choose the correct type for your particular situation (negative head/positive head etc). All pipe work between the storage tank, cylinder and to the pump should be 22mm and the shower positioned at least 250mm below the header tank. Please note that locating the pump further from the shower and cylinder may reduce the effectiveness of the pump and will certainly reduce the output pressure of water.

Ensure the pump is correctly installed and commissioned. Failure to fit the pump in accordance with the manufactures instructions may result in inadequate water supplies and lead to pump pulsing etc.

Maximum pressure: The shower requires water pressure up to but not exceeding 3 bar. Exceeding this maximum rating may damage the product and will invalidate your Guarantee.

CHECK ALL WATER CONNECTIONS ARE WATERTIGHT. PREFITTED CONNECTIONS MAY ONLY BE MADE HAND TIGHT AT MANUFACTURE AND/OR MAY WORK LOOSE IN TRANSIT

Electrical Connections For Non Steam\Hydro Version

MAIN POWER

This Steam Shower requires connections to MAINS ELECTRICITY.

1 x 13amp

The Shower is delivered with a standard 3 pin plug on the end of the power cord. This is for **TESTING** purposes only.

For final fix this product **MUST** be connected via an ISOLATED FUSED SPUR. This work may require the services of a Qualified Part P Registered Electrician.

RCD (Residual Current Device)

This shower product also comes pre-fitted with an RCD. This device provides safety cut of in case of an electrical fault.

If the Main Board (Consumer Unit) in the property is already RCD protected you **MUST** remove the one fitted to this product.

CONNECTING LIGHTS, FAN, OZONE Etc

Each component needs to be connected to the Electronic Control Unit.

Each component (Fan, Ozone, Speaker etc) has a thin 12v cable with a plug on the end. You will also see that each cable has a sticker with an Icon to indicate what it is.

The electronic control unit behind the showers central tower panel has a large number of cables. Again, each of these cables has a similar plug and a label corresponding to those of the Fan, Ozone, Lights etc. Match each item and make the connection securely.

AERIAL

Position the Radio aerial wire in a position that allows the radio to receive the best possible signal. Note that local interference from Taxis, Ham Radio, Emergency Service, Hospitals etc may affect reception.

ELECTRONIC CONTROL PANEL

The Shower has an electronic control panel to allow you to operate and control the steam production, lights, radio and audio system. Locate the communication cable coming from the panel at the rear of the shower and connect it to the corresponding cable that will be found coming from the electric control unit. This connection uses a series of small pins inside, **CARE MUST BE TAKEN MAKING THIS CONNECTION** to not bend the pins. The plugs are marked with an ARROW to identify which way they connect.

You MUST ensure all electrical work is carried out in accordance with current Legal requirements.

Sealing the Shower

OPTIONAL:

Under normal use, the shower will return all water back into the tray. Should you choose, we recommend that you seal the shower internally with a good quality bathroom sealant to provide an extra level of water proofing.

All sealant placed on the inside of the shower with a good quality 'Anti-Moulding' Sealant.

After allowing the sealant to set (as per the sealant directions), move on to the water test and check for signs of water leaking, please attend to them as required.

Water Testing

This is an important step to complete the shower. You should test all fittings and fixtures of the shower to ensure the shower is fit for use.

Items such as, but not exclusive to, the connections for example are connect prior to delivery for illustration purposes ONLY and will not be water tight and further can become more loose during transit.

You should treat all connections and fittings as such and fully ensure all connections are complete and ready to be used

You should run and completely test all fixtures and features on the shower, as well as its water integrity to the level of normal use until you are confident of its completion

PLEASE NOTE:

The shower is made up of solid parts (glass, metal, Acrylic) Any leaks found during testing will be down to incorrect installation/sealing - you should spend a good amount of time water testing the shower before 'signing it off' with the customer to avoid returning

Due to the design of the shower, no excessive silicone should be on display. This means that with normal use and cleaning, there will not be any escape of over the trays edge and on to the bathroom floor. There will be areas on the shower where water will pass and escape to the shower tray, however this will travel around the tray and return via the water channels back into the shower.

There might be areas on the shower, like corners or gaps that during normal showering are subjected only to sustainable amounts of water. These areas when sprayed directly and heavily with the shower head in a fashion thats inconsistent to showering, may overwhelm the shower tray lip and return channels allowing water on to the bathroom floor. We guarantee our showers will not leak during regular showering use/practices without any silicone on show.

However, if you wish to obtain a further level of security you can do so by adding the sealant. You should water test and add where required as you test to gauge the level of sealing required to meet your requirement

Final Testing

Check and test that each outlet function (hand shower, body jets and monsoon) work as expected by rotating the DIVERTOR DIAL (top chrome dial).

Check the ON/OFF dial enables the water to be fully on or off in the position indicated on the valve markings.

Check the Temperature can be increased and decreased by turning the lower chrome shower valve dial. Test that the button can be pressed at 38 degrees to turn the dial to the hottest settings.

Check the water runs to the waste/plug efficiently. A small amount remaining in the tray is normal.

FAULT FINDING

Water does not exit tray fast enough.

The tray must be leveled and a suitable 'fall' on the tray that enable the water to run to the plug. Additionally, the waste hose (under the tray) should have suitable fall to allow water to exit quickly.

Water pressure / flow is low on some or all shower options.

Check all the hoses are not trapped or kinked and thus restricting flow. Check also that any washers are not out of position and restricting flow. Ensure you have OVER 7.5 litres per minute flow and over 2 bar water pressure.

Water is 'pulsing' .

If a pump has been used to supply water under pressure and the back jets, or hand shower cause the pump to start and stop (PULSING WATER), remove the NON RETURN VALVES. Remove the Braided hoses at the rear of the shower. Look inside the valve where the hoses connected and you will see a silver coloured 'C' clip. Remove this and this will enable the NRV to be removed (white plastic item). Refit the hoses and re-test. Pulsing may also be noted where a pump has not been fully commissioned and there is air in the system.

Doors do not meet correctly and or bind when opening or closing.

Adjust the door runner cam wheels correctly to enable smooth running and operation.

Water is leaking out of the shower.

Dry the shower fully. Once dry, turn on the shower and operate the functions and look for where the water is leaking from. Apply sealant to the area where the water is leaking from.

The shower temperature is low.

If the water in the rest of the house is at a suitable temperature, then you may need to replace the thermostatic cartridge. Limescale or other dirt can impair the function of the cartridge.

For more help with your shower, please call, our technical team will be on hand to help.

Electronic Control Panel

Your shower is fitted with an electronic control panel that allows you to operate the electronic features of your shower.

From the control panel you can control the lights, Radio and Bluetooth audio.

Power ON / OFF

In standby mode this button is lit Red.

Press and keep pressing the power button until the panel beeps and the light turns Blue. The Panel is now active.

If the panel is not used for 30 seconds, the panel will LOCK. This is noted by the lines in the display FLASHING. To deactivate the LOCK, simply press and hold the POWER button until a beep is heard and the lines stop flashing.

LIGHTS

This model comes with an LED 'Halo' ring light surrounding the monsoon. Press the light button. With each press, the display will show ON1, ON2, ON3, OFF. The panel is able to accept up to three different light relays, hence the various light modes. Toggle to OFF to turn the light off.

FAN

The circulation fan can be activated to draw air/steam inside the cabin out. This may be used in conjunction with the steam.

RADIO

This button activates the built in FM Radio. In this mode the power button will be lit White. Pressing the TUN TEL button and then using the ARROW buttons allows you to change radio frequency.

REMOVE PROTECTIVE FILM ON CONTROL PANEL BEFORE USE

BLUETOOTH

Pressing this button will allow you to receive audio played from Bluetooth enabled device. You can control volume and skip tracks as described for the USB option. You will have to PAIR the shower to a bluetooth device first - see following page. When this mode is activated then Power button will be lit Red.

ARROWS

The Arrow buttons control Tuning, Volume, Track Skip etc depending upon which mode is currently selected.

TUN TEL

Pressing this button will allow you to enter the tuning mode when the Radio is activated. The current frequency will be displayed and by using the Arrow keys can adjust the precise frequency.

M

The button can be used to Store Radio stations into Memory. The button also serves as a toggle the function of the ARROW keys for time/temperature/track/volume/tuning etc.

Cleaning and third party product use

DO NOT CLEAN BY SPRAYING THE HAND SHOWER DIRECTLY INTO AREAS THAT MAY PASS WATER - UNLESS YOU HAVE ADDED THE ADDITIONAL INTERNAL SILICONE IN PREVIOUS STEP

This shower should be cleaned after every use to remove the build up of dirt and bacteria. We would recommend that after normal showering use, that the cabin doors are left open until the inside is fully dry. This will help prevent the build up of soap scum, dirt and bacteria.

The shower cabin can trap dirt in gaps between joints of panels etc, which may require extra care and attention during cleaning. To minimise dirt build up between panels, the application of a bead of silicone sealant suitable for shower/bathroom use will fill the gap leaving a smooth finish and both stop dirt build up and offer an extra level of water tightness.

The shower cabin can be cleaned with any suitable cleaning solution that is not abrasive, and is recommended by its manufacturer for use on acrylic, chrome and glass surfaces as appropriate to the materials in the shower. Not all general bathroom cleaners are designed for use on some materials of this product. Harsh abrasive cleaners containing bleach or peroxide **MUST NOT** be used

DO NOT USE CIF OR OTHER ABRASIVE CLEANING PRODUCTS ON THIS SHOWER.

In hard-water areas, wash down the unit and remove the dirt periodically. Fitting a water filtration device is also advisable in areas where the water is likely to lead to a build up of minerals within the pipes and diverter assembly. Hard water WILL reduce the life of the Parts that come into contact with water, such as the Thermostatic Valve. Fitting water softening devices will prevent this.

Steam Pod

Where products are being used to infuse the steam in the steam pod, only products that are designed for such use should be used. The use of products not designed for infusing of steam may lead to damage to this product inducing but not exclusively, discoloration to the pod, tray base and or cabin walls. Products such as, but not exclusive to Olbas Oil is an example of this.

Essential Oils, whilst no noted damaging effects have ever been reported on the materials of the products, Essential oils can be aggressive toward rubbers and plastics when in direct contact. Damage such as cracking, crazing, discoloration, therefore are NOT covered by Guarantee where oils have been used.

Additional information and help

For more details on the installation of this shower, technical support, FAQ please call The Technical Helpline on 01524 489939

If you need a replacement part for your product, please call use the warranty claim form on our website together with your warranty registration details.

To find parts for your product after the Guarantee has expired, please send us an email

Thermostatic Cartridge

Your shower is fitted with a Thermostatic Cartridge. Should you need to remove or replace the cartridge for maintenance or replacement, follow the instructions below.

Q: I am having to turn the dial round as far as it will go to the hottest setting and the water is only just warm.

A: Your Thermostatic Cartridge has showed signs of failure. You will need to replace the Cartridge.

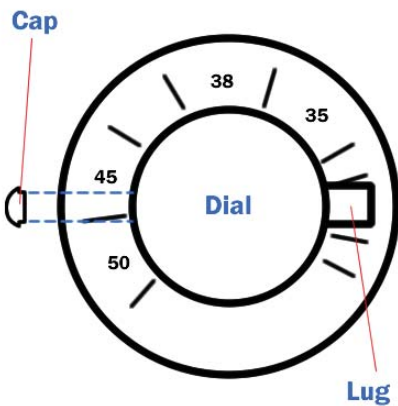

Q: Why did my Thermostatic Cartridge fail?

A: Hard Water areas will result in calcification, which will build up in the Cartridge. Other reasons might be age of the Cartridge or even dirt or debris collecting in the Cartridge from the pipes.

BEFORE STARTING ENSURE THAT THE WATER SUPPLIES ARE DISCONNECTED OR ISOLATED

It is imperative that the water supply to your shower is between 1 and 3 bar as exceeding this may damage the Thermostatic Cartridge.

First check behind the shower. On the bottom dial, is there a small screw in the valve body holding the thermostatic cartridge in place? If so, remove this and replace when finished

From inside the shower, on the lower of the three dials, remove the chrome coloured plastic cap that is fitted on the opposite side to the chrome lug.

The chrome cap will just pull off.

Keep the cap safe.

Using a 2.5mm Allen key, insert this into the hole where the chrome cap was fitted and loosen the grub screw about 1 turn to loosen.

DO NOT UNSCREW FULLY.

Now remove the chrome dial.

With the Chrome dial removed you will see a plastic ring covering with the Thermostat underneath.

Note down the position the ring is placed in.

Pull the plastic ring (Temperature safety lock) towards you to remove.

Keep this part safe

You will now see the head of the Thermostat clearly visible.

Turn the head of the cartridge counter-clockwise to remove.

To fit your new Thermostat, simple reverse this process.
