

TwistFlush[e³]

Maximum vortex power at an attractive price

With the new TwistFlush[e³] toilet flushing system, Villeroy & Boch has developed a special version of the vortex flush technology for use in public and commercial sanitary facilities and residential construction projects. TwistFlush[e³] is setting new standards for efficient flushing and resource consumption in these areas.

Evolutionary

- + Advanced vortex flush technology at an attractive price – a real competitive advantage!

Economic

- + Resource-saving reduced flush volume of just 3/4.5 litres of water per flush: no need for repeat flushing
 - + Save water and reduce operating costs in the long term!*
- A company with 1,000 employees can save up to 675,000 litres of water per year.**

Efficient

- + Excellent flushing performance confirmed in the plastic ball test: the requirements of the European flushing standard EN997 were exceeded by a factor of 10!***
- + Complete splash-free coverage of the inner bowl thanks to the precise water flow, powerful vortex and intelligently designed bowl architecture
- + The strong performance practically eliminates the need for toilet brushes
- + Cleaning time reduced by 50% thanks to the rimless design!*** A company such as Villeroy & Boch can save up to €16.000 in cleaning costs per year.**

Range

- + TwistFlush[e³] is integrated in the new Architectura wall-mounted toilets – available in White Alpin, optionally with hygienic AntiBac and CeramicPlus surfaces

* in comparison with a flushing volume of 3 / 6 litres

** As confirmed by the wfk-Institut für Angewandte Forschung GmbH / WL 4093A/23

*** in comparison with a V & B toilet with a rim
