

# TwistFlush

## More power, less water

TwistFlush is the new toilet flushing system which combines optimum flushing performance with water efficiency. It exploits the physical power of swirling water for hygienic flushing and clean results.

### Functions and features

+ Powerful swirling water

The swirling water generates a very powerful vortex which flushes virtually the entire inner surface of the toilet, effectively removing soiling. The flush technology (patent pending) clearly surpasses the standard requirements\*.

+ Save up to 19,700 litres of water a year

The toilet only uses 4.5 litres for a big flush and 3 litres for a little flush. Thanks to the powerful flush you usually only need to flush once. This means that a family can save up to 19,700\*\* litres a year.

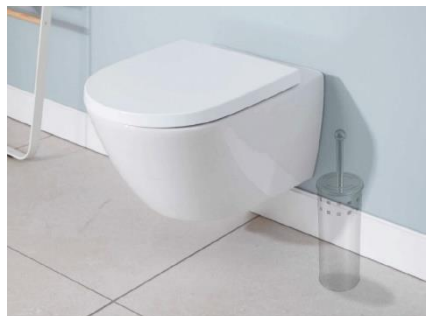

+ The brushless future starts here

The conically shaped bowl with very steep and ultra-smooth walls largely avoids soiling from the outset. The powerful flushing action deals with the rest.

+ Tough on dirt and terms

The rimless bowl and CeramicPlus facilitate cleaning, while AntiBac prevents 99.9 % of bacterial growth.

The water swirls over almost the entire inner surface area, with no splashing\*. There is a proven reduction in the generation of aerosols, which helps to prevent the spread of germs and pathogens.

### Range

- + TwistFlush is integrated in the new Subway 3.0 wall-mounted and floor-standing toilets - available in White Alpin and StoneWhite.

\* Requirements in accordance with European standard EN 997.

\*\* 4-person household, compared with a conventional 6-litre flush. Average use: 5 x per person per day, based on information from the German Federal Environmental Agency
